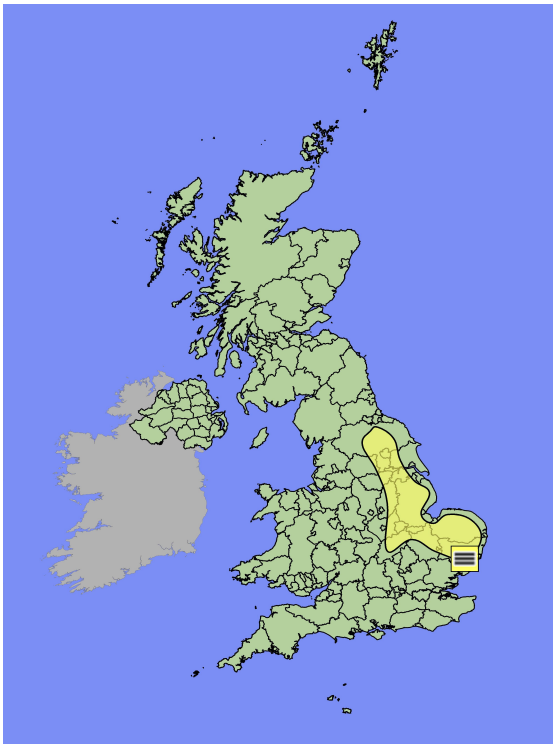
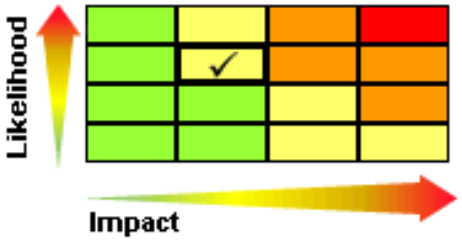
National Severe Weather Warning Service





Chief Forecasters Assessment
Clear skies overnight will allow fog patches to develop over parts of northern, eastern and central England during the early hours. These fog patches will then persist through the morning rush hour before slowly clearing during the course of Tuesday morning. Some patches will be dense with visibility dropping below 100 metres, but equally it is important to realise that the patchy nature of this fog means that not all areas within the yellow warning area will be affected by fog. Places in the Vale of York, Lincolnshire and East Anglia are considered most at risk of fog.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **02:00 on Tue, 05th Mar 2013** until **10:00 on Tue, 05th Mar 2013**

Fog patches are expected to develop over parts of northern, eastern and central England during the night and persist through the morning rush hour into Tuesday morning. Some of these fog patches are likely to be dense with visibility locally falling below 100 metres. The public should be aware of the potential of some disruption to transport.
